SUMMARY

Backend and cloud-focused software engineer with 5+ years of experience building and operating customer-facing platforms across AWS, Azure, and Kubernetes environments. Strong hands-on background in backend services, microservices, REST APIs, CI/CD automation, production reliability, and AI-assisted development workflows using tools such as Cursor and GitHub Copilot. Known for combining architecture-minded thinking, practical execution, and emerging automation patterns including multi-agent orchestration in fast-paced enterprise environments.

EXPERIENCE

Purolator Inc

Nov. 2023 – Present

Full Stack Developer

Mississauga, ON

- Led end-to-end development of Purolator's high-traffic AI chatbot platform, supporting **100k+ daily users** and helping deliver a reliable customer experience at scale through strong Kubernetes- and Docker-based production engineering.
- Owned key backend and full-stack capabilities for Purolator Your Way, building customer-facing delivery management features including a custom authentication flow, Java-based AWS Lambda APIs, API Gateway integrations, React frontends, and GitHub Actions CI/CD pipelines.
- Engineered and operated production cloud platforms across AWS, Kubernetes, and Docker, using services such as Lambda, API Gateway, DynamoDB, CloudWatch, Secrets Manager, S3, RDS, ECS, CloudFront, and WAF, with direct responsibility for observability, alerting, deployment reliability, and on-call support.
- Maintained and enhanced Purolator's external Tracking API and Amazon tracking integrations, supporting systems that process millions of requests per day and requiring strong focus on availability, performance, and incident response.
- Contributed to Purolator Vision, an enterprise dashboard for large-volume shippers, delivering backend and integration work in Java and Python on AWS to support advanced shipment visibility and operational workflows.
- Designed and shipped a full-stack React and Node.js application integrated with Google Maps and Salesforce, enabling customers to locate nearby drop-off and pickup locations through a seamless self-service experience.

Cineplex Digital Media

May 2021 – Nov. 2023

Software Developer II

London, ON (Remote)

- Built backend services in Node.js and TypeScript using Azure Functions to manage and troubleshoot **thousands of distributed digital signage devices**.
- Led a core platform migration from Azure Device Twins to MySQL, improving system responsiveness, scalability, and data access patterns.
- Developed internal full-stack operational tools and REST APIs supporting content management and device servicing workflows.
- Implemented CI/CD pipelines with Jenkins and Selenium to improve release consistency and automated test coverage.
- Deployed and managed containerized services with Helm and Ansible, contributing to more reliable operational delivery.

TritonWear

Aug. 2020 – May 2021

Full Stack Developer

Toronto, ON

- Rewrote core application components in TypeScript using MVVM principles to improve maintainability, quality, and team velocity.
- Applied test-driven development practices with Jest to strengthen unit coverage and reduce regression risk.
- Built scalable Node.js APIs and AWS-based microservices supporting athlete performance and analytics workflows.
- Delivered responsive product features across Angular and Ionic applications for a globally used connected-device platform.

Inclusive Media and Design Centre (Ryerson University)

Software Developer / Research Assistant

Sep. 2018 – May 2020

Toronto, ON

- Built NICKEL, a Flask-based web application used by researchers to assess accessibility in academic content.
- Developed a Java-based Android application integrated with IBM Watson APIs for media and health-related research workflows.
- Refactored a legacy codebase, improving performance by **50%** and reducing storage usage.
- Designed secure databases for sensitive health information with attention to data protection requirements.

EDUCATION

Toronto Metropolitan University (formerly Ryerson University)

Bachelor of Science (Honours) in Computer Science

Sept. 2015 – May 2020

Toronto, ON

- **Relevant focus:** software engineering, databases, algorithms, and production-ready application development.

SKILLS

Languages : Java, JavaScript, TypeScript, Python, SQL, Bash

Backend : Node.js, Express, Flask, Java backend services, REST APIs, microservices, serverless architectures

AWS : Lambda, API Gateway, DynamoDB, S3, ECS, EKS, RDS, SQS, SNS, Step Functions, CloudWatch, IAM, VPC, EC2, ElastiCache (Redis), Secrets Manager, CloudFormation, CodePipeline, CodeBuild, CodeDeploy

Architecture : Distributed systems, event-driven systems, scalable system design, resilient services, API design, data modeling

DevOps : Docker, Kubernetes, Helm, Jenkins, Ansible, Git, CI/CD, infrastructure as code, zero-downtime deployments

AI Dev : Cursor, GitHub Copilot, AI-assisted development workflows, prompt-driven coding, multi-agent orchestration

Testing & Ops : Jest, Selenium, unit testing, TDD, automated testing, monitoring, logging, production support, incident resolution, root cause analysis, performance optimization, cost optimization

Frontend : React, Angular, Ionic
